Internship

Haldia Petrochemicals Limited <i>AI & Full-Stack Developer Intern</i>	May 2026 – Jun 2026 <i>Haldia, West Bengal</i>
- Built an AI-powered ticket management system with intelligent routing and workflow automation using Python, Flask, SQLite, Ollama, and LangChain. - Implemented REST APIs, role-based access control, and authentication systems for a full-stack support and ticketing platform, backed by a MySQL database schema for tickets, user roles, and workflow states. - Integrated LangChain-based AI ticket analysis to automatically categorize and prioritize incoming support tickets, reducing manual triage effort. - Developed responsive admin and user dashboards using HTML, CSS, and JavaScript, applying system design principles for a scalable, modular full-stack architecture. - Collaborated with mentors and cross-functional teams to debug, test, and refine features, strengthening problem-solving and software development practices.	

Projects

SmartDesk AI GitHub <i>Python, Flask, SQLite, REST API, Generative AI</i>	May 2026 – Jul 2026
- Built a full-stack helpdesk application with a dual AI backend - Ollama for local development, auto-switching to Google Gemini in production. - Added AI ticket auto-categorization, a pre-ticket resolution chatbot, and a screenshot analyzer that auto-fills ticket details, implemented hashed-password auth, role-based access, and activity logs; deployed on Render via Gunicorn.	
Token Bucket API Rate Limiter GitHub <i>Java, Spring Boot, API, Redis Cloud, Docker, Render</i>	Jun 2025 - Jul 2025
- Built a Spring Boot API rate limiter using the Token Bucket algorithm with Redis, restricting users to 5 requests/minute and returning HTTP 429 on excess requests. - Designed a thread-safe in-memory fallback that automatically activates if Redis goes offline, has connection issues, or invalid credentials keeping the API fully functional with zero 500 errors. - Added admin controls for temporary bans and permanent blacklisting via a request interceptor that checks blacklist, ban, and token-bucket status before each request and deployed it on Render.	
Customer Churn Analysis GitHub <i>Python, Random Forest, Feature Engineering</i>	Jun 2025 - Jul 2025
- Analyzed 14,606 customer records (63 features) for a utility company. Engineered price-sensitivity and usage-volatility features and trained a Random Forest model achieving 91% accuracy. - Identified key churn drivers and proposed a CRM-integrated churn-prediction system projected to reduce churn by 25–30%.
